Thanks for the whitefish info. I did not know that.

So are there so many pike that salmon cannot exist? What keeps the pike out of the rest of the Kvichak system?

Hi Phil,
No barriers but lots of hungry pike.
The system is an important spawning area for whitefish an important subsistence food for people in the region.

Hi Carol,
The Anadromous Fish Catalogue documents salmon only in the lower reaches of the Chulitna. Do you know if there is a migration barrier low in the watershed?

Phil
